

Manjunath Kalkutagi

9972381627 | mnkalkutagi@gmail.com | Bangalore, Karnataka

PROFILE

Backend Engineer with 4+ years of experience designing and scaling **Node.js/TypeScript** systems, RESTful APIs, and data pipelines across fintech and enterprise SaaS products. Proven impact at companies like Vymo — boosting API performance by 40%, reducing query times by 30% with Elasticsearch, and integrating enterprise platforms like Salesforce for clients including HDFC,MFIN. Hands-on with microservices, event-driven architecture (RabbitMQ), and polyglot persistence (MongoDB, PostgreSQL, Aerospike). Currently deepening expertise in distributed systems and system design for high-scale environments.

Career Break & Independent Systems Engineering

Jan 2024 – Present

Took a planned sabbatical for family caregiving (Jan 2024 – Mar 2025). Returned to active technical development in Mar 2025, independently building and publishing production-grade backend tools to npm and GitHub.

- **Snippet Search Engine (Search Architecture):** Architected a high-speed snippet search engine using Node.js, PostgreSQL, and Elasticsearch with sub-millisecond query performance. Published the companion CLI tool to npm. (Repos: [snippet-search-mvp](#) , [snippet-cli-tool](#))
- **Table Reservation System (Event-Driven Microservices):** Engineered a containerized reservation backend using Node.js, RabbitMQ, and Docker Compose with polyglot persistence (PostgreSQL, Elasticsearch). Implemented asynchronous background workers for zero-data-loss cross-service communication. (Repo: [table-reservation-system](#))
- **Modern Deployment Workflows:** Containerized backend environments utilizing Docker; managed MongoDB and PostgreSQL clusters ensuring production-readiness across all independent projects.

EMPLOYMENT HISTORY

Vymo | Bangalore, Karnataka

Member of Technical Staff | 09/2022 - 12/2023

Lead Management & Data Optimization Specialist. Enhanced sales efficiency and data integrity through innovative software solutions.

- **Integration & Client Solutions:** Improved workflow efficiency 20% by integrating Salesforce via REST APIs. Boosted client efficiency 23% by architecting bespoke Node.js modules for enterprise clients (e.g., MFIN) to streamline sales workflows. Increased user engagement 30% by optimizing lead management and activity flows.
- **Performance & Scalability:** Boosted API performance 40% by integrating Aerospike DB for high-speed caching. Sped up query performance 30% and cut data errors 25% by implementing Elasticsearch for report generation. Scaled 15+ Node.js RESTful APIs for high-availability core application services.
- **Automation & Data Management:** Automated lead reporting (500+ files/month) to S3 and SFTP servers using cron. Optimized database storage and improved data access speeds by building an automated system to purge inactive leads. Ensured high availability by resolving critical, product-level geolocation and timezone bugs.
- **Process & Collaboration:** Reduced production bugs 30% through rigorous code reviews and Git best practices. Coordinated with Product Managers in an Agile/Scrum environment to refine backlogs and prioritize sprints.

MountBlue | Bangalore, Karnataka

Software Developer Engineer | 05/2021 - 08/2022

Custom Lead & Partner Module Development for Vymo (MountBlue)

- **Custom Enterprise Solutions:** Leveraged Node.js to architect custom lead and partner management modules for enterprise clients (e.g., HDFC), directly improving client workflow efficiency.
- **Platform Integration:** Spearheaded the development of seamless integrations, bridging client requirements with core system capabilities to enhance overall platform functionality.
- **Data Pipeline Optimization:** Consolidated and optimized data reporting workflows, reducing 35 disparate reports down to 20 comprehensive dashboards using REST APIs, Elasticsearch, and MongoDB while maintaining 100% data coverage.
- **System Stability:** Identified and resolved critical system bugs across Support, Quality, and Internal teams, significantly improving overall platform stability and reliability.
- **Client Collaboration:** Partnered closely with client stakeholders to gather technical requirements, design scalable solutions, and provide engineering guidance.

Freelancer | Belgaum, karnataka

Software Developer | 01/2020 - 05/2021

- **Full-Stack Development & Data Visualization:** Developed a comprehensive web application for a financial data services client. Architected a robust backend with Node.js, Express.js, and MongoDB to manage complex data models. Created a responsive front-end using React.js to provide real-time data visualization and a seamless user experience. Integrated multiple third-party APIs to aggregate and display critical market data, resulting in a 25% increase in user engagement.

TECHNICAL SKILLS

- **Backend:** Node.js, Express.js, RESTful APIs, SOAP APIs, RabbitMQ
- **Databases:** MongoDB, MySQL, Aerospike DB, Elasticsearch, PostgreSQL
- **Frontend:** React, HTML, CSS, Tailwind
- **DevOps & Tools:** Git, GitHub, Linux, Cron, SFTP, S3, Docker
- **Integrations:** Salesforce Integration, API Integration
- **Methodologies:** Agile, Scrum, Data Management, Automation

Education

VTU-RC | Mysore, Karnataka

Master of Technology | 11/2015

Specialization In Digital Electronics and Communication Systems.

KLS Gogte Institute of Technology | Belgaum, Karnataka

Bachelor Of Engineering | 07/2012

Specialized in Electronics & Communications
